

CY 2000 & 2001 TREND RESULTS FOR NETL INJURIES

Conclusion # 1 The majority of NETL injuries continue to be the result of unsafe acts rather than unsafe conditions.

Conclusion # 2 The major specific causes of NETL injuries continue to be improper material handling and slips, trips, and falls. Note that in comparison to the previous NETL two year period, a new category of injuries, "Repetitive Motion", has emerged.

Conclusion # 3 The majority of NETL injuries result in sprains and strains and are a result of overexertion affecting the back.
